

Anglo American Oil & Propane

PREPARING FOR WINTER

Checklist

- Schedule an annual furnace maintenance visit to keep costly repairs at bay, ensure safety, and increase the lifespan of your furnace.
- Save up to 15% on energy costs by changing your furnace filter each month. It also increases the lifespan of your furnace and improves air quality in your home.
- Upgrade to a programmable thermostat. Save 1% on your bill for every degree less/more over an eight-hour period. Increase your comfort by having the home set for different wake/sleep temperatures.
- Check weather stripping and caulking around doors and windows and repair as needed. Supplement attic insulation if needed. According to Energy Star this can save you up to 10% of home energy costs.
